

ABSTRACT OF THE DISCLOSURE

A mail system equipped with a mail address manager for managing a mail address or addresses of one or more destinations.

5 When a mail address of a particular destination is updated, the mail address manager registers the old mail address of the particular destination and a new mail address in correlation with each other. The result is that, even when the mail address of an intended destination has been updated, 10 a mail source can proceed to send an e-mail, which is addressed to the intended destination at the old mail address, exactly to the intended destination without checking whether the mail address of the intended destination has been updated. Also at the mail source, it is possible to send an e-mail exactly 15 to an intended destination without checking a restriction on a system environment of the intended destination.
